

Dassault Presents Virtual Falcon 6X at LABACE 2018

THE LATIN American Business Aviation Conference & Exhibition (LABACE) featured a virtual representation of Dassault's newest aircraft, the Falcon 6X, the most spacious, advanced and versatile ultra-widebody twinjet in business aviation. This new 5,500nm aircraft will make its first flight in early 2021 and begin deliveries in 2022. The new twinjet will also be equipped with the industry's most advanced digital flight control and cockpit technologies, drawing on heritage from Dassault fighter jet programmes. It will be the first business jet to carry a flaperon, a new control device that further improves control during approach, especially on steep descents.
